PROFILE

A software Engineer with more than two years of robust experience in the field, focusing on the integration of API's development using dot-net. I am adept at thriving in dynamic, high-pressure settings, where I creatively and efficiently tackle challenges to meet productivity objectives. My strengths include adaptability, proactive collaboration within teams, and a commitment to implementing clean code principles. Continuously striving for enhancement, I eagerly pursue opportunities for professional growth and refinement.

EMPLOYMENT HISTORY

.NET Developer at Trail Five Technologies, Islamabad.....December 2022 – Present

- **Developed and maintained business-critical backend** services for brelli.nl, one of the prominent car leasing companies in the Netherlands, using .NET Core.
- **Ensured scalable and reliable API development** to support the company's leasing platform and customer operations.
- **Utilized .NET Core to build** and optimize high-performance, microservices-based applications.
- **Leveraged advanced .NET Core** tools and libraries to implement secure, efficient, and maintainable solutions.
- **Designed and implemented robust RESTful APIs**, supporting complex leasing workflows, vehicle management, and customer documentation.
- **Integrated third-party services** and external APIs like SCRIVE for digital signature, Hiltermann, DutchFinance Bank API for online transactions, to enhance system functionality and provide seamless customer experiences.
- **Developed and optimized database queries** using Entity Framework Core for handling large volumes of leasing data.
- **Designed and maintained SQL Server databases**, ensuring data integrity, security, and efficient query performance.
- **Integrated data access control logic to manage role-based** access for different stakeholders (dealers, partners, customers).
- **Developed custom business logic** for key processes such as customer documentation, deal management, and insurance processing within the car leasing ecosystem.
- **Automated workflows for deal submissions**, approvals, and document generation, reducing manual processes and enhancing operational efficiency.
- **Worked within an Agile environment**, collaborating closely with front-end developers, testers, and product managers to deliver high-quality solutions.
- **Participated in daily stand-ups**, sprint planning, and code reviews to ensure timely and effective project deliveries.
- **Refined existing systems by identifying bottlenecks** and improving application performance and scalability.
- **Actively contributed to system refactoring efforts**, improving code quality and maintainability.
- **Designed and implemented a multi-tenant architecture** in .NET Core that allows multiple organizations or teams to securely access AI-based capabilities via isolated logical workspaces.
- **Integrated Large Language Models (LLMs)** through APIs, enabling real-time interaction between users and AI assistants across tenants. Users can input prompts, receive intelligent responses, and improve workflows via conversational AI.

- **Developed a "Gatekeeper" PR Review Flow:** Users can create Pull Requests (PRs) for modifying or contributing to a master prompt template repository. The Gatekeeper component (AI + rules engine) reviews, validates, and merges these PRs, maintaining quality and consistency in master prompt sets.
- **Implemented Prompt Summarization and RAG** (Retrieval-Augmented Generation) techniques to enhance response accuracy and reduce hallucination. Combined embedding-based search with LLMs to ground responses in factual internal knowledge.
- **Worked with Embedding Models** to vectorize prompt content and user documents, enabling semantic search and contextual understanding.
- **Utilized Vector Databases** to efficiently store and retrieve embeddings for similarity search and context injection in LLM prompts.
- **Incorporated Langchain and LangGraph** to manage complex AI agent workflows, including memory handling, tool selection, and routing across multi-step chains.
- **Ensured modular, scalable backend design using SOLID** principles and clean architecture in .NET Core, making the system extendable for future AI tools, tenant onboarding, and role-based access control.

.NET Developer at Swat University, August 2022 – October 2022

- **Designed and developed** a robust desktop application using ADO.NET and MS SQL Server, managing all aspects of student and academic record keeping.
- **Built a centralized Examination Management System**, streamlining processes from student registration to final transcript generation.
- **Implemented a GPA and CGPA** calculator for each student and semester, enabling real-time academic performance tracking.
- **Developed modules for student registration**, handling course enrollments, subject assignments, and semester activation.
- **Created a student clearance workflow** to automate approvals during graduation or semester withdrawal, ensuring proper handovers and approvals.
- **Maintained comprehensive student profiles**, including personal information, academic history, fees, and clearance status.
- **Designed and optimized SQL Server database schemas**, ensuring data consistency, security, and efficient data retrieval.
- **Utilized SAP Crystal Reports to generate dynamic reports such as:**
 1. Automatic Identity Cards
 2. Examination Forms
 3. Student Personal Ledgers
 4. Detailed Marks Certificates (DMC)
 5. Semester-wise Results
 6. Official Transcripts
- **Integrated Crystal Reports** into the application to allow one-click report generation, reducing manual effort and ensuring consistency across academic documents.
- **Enabled role-based access control** to differentiate privileges among administrators, exam controllers, and department heads.
- **Used GitHub for source control and versioning**, ensuring team collaboration and change tracking across the development lifecycle.
- **Conducted performance tuning and query optimization** to handle large volumes of academic and examination data efficiently.
- **Delivered a complete, user-friendly** solution used by administrative staff for daily operations, improving institutional productivity and data accuracy.

EDUCATION

University of Swat..... BS Computer Science
January 2018 – January 2022

SKILLS

C#.....	Git.....
Entity Framework Core.....	Jira.....
MVC & ASP.NET Core.....	IIS Deployments.....
MS SQL.....	Azure.....
API's integration.....	AWS S3.....
LINQ.....	Micro Services.....
SignalR.....	LangChain.....
CQRS.....	LLM Prompting.....
ADO.NET.....	

LANGUAGES

ENGLISH..... URDU.....

COURSES

C# .Net core (KPSDP).....Mar 2024- Jun 2024

REWARDS

Recipient of the University's Top Achiever Award..... University of Swat,
Acknowledged four consecutive times for outstanding academic performance.
